1 Overview

The Swift Navigation Binary Protocol (SBP) is a fast, simple, and minimal binary protocol for communicating with Swift devices. It is the native binary protocol used by the Piksi GPS receiver to transmit solutions, observations, status, and debugging messages, as well as receive messages from the host operating system, such as differential corrections and the almanac. As such, it is an important interface with your Piksi receiver and the primary integration method with other systems.

This document provides a specification of SBP framing and the payload structures of the messages currently used with Swift devices. SBP client libraries in a variety of programming languages are available at https://github.com/swift-nav/libsbp and support information for sbp is available at https://support.swiftnav.com/customer/en/portal/articles/2492810-swift-binary-protocol.

2 Message Framing Structure

SBP consists of two pieces:

- an over-the-wire message framing format
- structured payload definitions

As of Version 3.4.7, the frame consists of a 6-byte binary header section, a variable-sized payload field, and a 16-bit CRC value. All multibyte values are ordered in **little-endian** format. SBP uses the CCITT CRC16 (XMODEM implementation) for error detection¹.

| Offset (bytes) | Size (bytes) | Name | Description |
|----------------|--------------|--------------|--|
| 0 | 1 | Preamble | Denotes the start of frame transmission. Always 0x55. |
| 1 | 2 | Message Type | Identifies the payload contents. |
| 3 | 2 | Sender | A unique identifier of the sender. ² |
| 5 | 1 | Length | Length (bytes) of the Payload field. |
| 6 | N | Payload | Binary message contents. |
| N+6 | 2 | CRC | Cyclic Redundancy Check of the frame's binary data from the Message Type up to the end of Payload (does not include the Preamble). |
| | N + 8 | | Total Frame Length |

Table 2.0.1: Swift Binary Protocol message structure. N denotes a variable-length size.

3 NMEA-0183

Swift devices, such as the Piksi, also have limited support for the standard NMEA-0183 protocol.

Note that NMEA-0183 doesn't define standardized message string equivalents for many important SBP messages such as observations, baselines and ephemerides. For this reason it is strongly recommended to use SBP for new development. NMEA-0183 output is provided primarily to support legacy devices.

 $^{^1}$ CCITT 16-bit CRC Implementation uses parameters used by XMODEM, i.e. the polynomial: $x^{16} + x^{12} + x^5 + 1$. For more details, please see the implementation at https://github.com/swift-nav/libsbp/blob/master/c/src/edc.c#L59. See also A Painless Guide to CRC Error Detection Algorithms at http://www.ross.net/crc/download/crc_v3.txt

²By default, clients of 'libsbp' use a sender id value of '0x42' which represents device controllers such as the Piksi Console. On the Piksi, the sender ID is set to the 2 least significant bytes of the device serial number. A stream of SBP messages may also include sender IDs for forwarded messages from other systems. For instance, when using Starling as a hosted software product, Sender 0x1000 (4096) indicates a message originated from the GNSS subsystem, while sender 0x315 (789) indicates a message originated from the sensor fusion subsystem. Sender 0 always indicates the message has been forwarded and contains some form of differential corrections.

4 Basic Formats and Payload Structure

The binary payload of an SBP message decodes into structured data based on the message type defined in the header. SBP uses several primitive numerical and collection types for defining payload contents.

| Name | Size (bytes) | Description |
|----------|--------------|---|
| s8 | 1 | Signed 8-bit integer |
| s16 | 2 | Signed 16-bit integer |
| s32 | 4 | Signed 32-bit integer |
| s64 | 8 | Signed 64-bit integer |
| u8 | 1 | Unsigned 8-bit integer |
| u16 | 2 | Unsigned 16-bit integer |
| u32 | 4 | Unsigned 32-bit integer |
| u64 | 8 | Unsigned 64-bit integer |
| float | 4 | Single-precision float (IEEE-754) |
| double | 8 | Double-precision float (IEEE-754) |
| array | _ | Fixed or variable length array of any fill type |
| string | _ | Fixed or variable length string (NULL padded/terminated) |
| bitfield | _ | A primitive type, typically a u8, can encode boolean and enumerated status flags. |

Table 4.0.1: SBP primitive types

Example Message

As an example, consider this framed series of bytes read from a serial port:

```
55 0b 02 cc 04 14 70 3d d0 18 cf ef ff ff ef e8 ff ff f0 18 00 00 00 00 05 00 15 dc
```

This byte array decodes into a MSG_BASELINE_ECEF (see pg. 22), which reports the baseline position solution of the rover receiver relative to the base station receiver in Earth Centered Earth Fixed (ECEF) coordinates. The segments of this byte array and its contents break down as follows:

| Field Name | Туре | Value | Bytestring Segment |
|-------------------|------|----------------------------|-------------------------------------|
| Preamble | u8 | 0x55 | 55 |
| Message Type | u16 | MSG_BASELINE_ECEF | 0b 02 |
| Sender | u16 | 1228 | cc 04 |
| Length | u8 | 20 | 14 |
| Payload | | _ | 70 3d d0 18 cf ef ff ff ef e8 ff ff |
| | | | f0 18 00 00 00 00 05 00 |
| MSG_BASELINE_ECEF | | | |
| .tow | u32 | $416300400\;\mathrm{msec}$ | 70 3d d0 18 |
| .X | s32 | $-4145~\mathrm{mm}$ | cf ef ff ff |
| .y | s32 | $-5905 \mathrm{\ mm}$ | ef e8 ff ff |
| .z | s32 | $6384~\mathrm{mm}$ | f0 18 00 00 |
| .accuracy | u16 | 0 | 00 00 |
| .nsats | u8 | 5 | 05 |
| .flags | u8 | 0 | 00 |
| CRC | u16 | 0x9443 | 15 dc |

Table 4.0.2: SBP breakdown for MSG_BASELINE_ECEF

5 Message Types

Packages define a logical collection of SBP messages. The contents and layout of messages in packages marked **stable** are unlikely to change in the future. **Draft** messages *will change with future development* and are detailed purely for *informational purposes only*. Many draft messages are implementation-defined, and some collections, such as the acquisition package, are used for internal development.

| Mag | Package | Msg ID | Name | Size (bytes) | Description |
|--|-------------|--------|--------------------------|-------------------------|---|
| Imu | Stable | | | | |
| | Ext Events | 0x0101 | MSG_EXT_EVENT | 12 | Reports timestamped external pin event |

6 Stable Message Definitions

6.1 Ext Events

Messages reporting accurately-timestamped external events, e.g. camera shutter time.

$MSG_EXT_EVENT - 0x0101 - 257$

Reports detection of an external event, the GPS time it occurred, which pin it was and whether it was rising or falling.

| Offset (bytes) | Size (bytes) | Format | Units | Name | Description |
|-------------------|-----------------|--------|-------|-------------|--|
| 0 | 2 | u16 | weeks | wn | GPS week number |
| 2 | 4 | u32 | ms | tow | GPS time of week rounded to the nearest millisecond |
| 6 | 4 | s32 | ns | ns_residual | Nanosecond residual of millisecond-rounded TOW (ranges from -500000 to 500000) |
| 10 | 1 | u8 | | flags | Flags |
| 11 | 1 | u8 | | pin | Pin number. 09 = DEBUG09. |
| | 12 | | | | Total Payload Length |

Table 6.1.1: MSG_EXT_EVENT 0x0101 message structure

Field 6.1.1: Flags (flags)

| Value | Description |
|-------|--|
| 0 | Low (falling edge) High (rising edge) |

Table 6.1.2: New level of pin values (flags[0])

| Value | Description |
|-------|-----------------------------------|
| 0 | Unknown - don't have nav solution |
| 1 | Good (< 1 microsecond) |

Table 6.1.3: Time quality values (flags[1])

6.2 Imu

Inertial Measurement Unit (IMU) messages.

$MSG_{IMU}RAW - 0x0900 - 2304$

Raw data from the Inertial Measurement Unit, containing accelerometer and gyroscope readings. The sense of the measurements are to be aligned with the indications on the device itself. Measurement units, which are specific to the device hardware and settings, are communicated via the MSG_IMU_AUX message. If using "time since startup" time tags, the receiving end will expect a 'MSG_GNSS_TIME_OFFSET' when a PVT fix becomes available to synchronise IMU measurements with GNSS. The timestamp must wrap around to zero when reaching one week (604800 seconds).

The time-tagging mode should not change throughout a run.

| Offset (bytes) | Size (bytes) | Format | Units | Name | Description |
|-------------------|-----------------|--------|----------|-------|--|
| 0 | 4 | u32 | | tow | Milliseconds since reference epoch and time status. |
| 4 | 1 | u8 | ms / 256 | tow_f | Milliseconds since reference epoch, frac- tional part |
| 5 | 2 | s16 | | acc_x | Acceleration in the IMU frame X axis |
| 7 | 2 | s16 | | acc_y | Acceleration in the IMU frame Y axis |
| 9 | 2 | s16 | | acc_z | Acceleration in the IMU frame Z axis |
| 11 | 2 | s16 | | gyr_x | Angular rate around IMU frame X axis |
| 13 | 2 | s16 | | gyr_y | Angular rate around IMU frame Y axis |
| 15 | 2 | s16 | | gyr_z | Angular rate around IMU frame Z axis |
| | 17 | | | | Total Payload Length |

Table 6.2.1: MSG_IMU_RAW 0x0900 message structure

Field 6.2.1: Milliseconds since reference epoch and time status. (tow)

| Value | Description |
|-------|--|
| 0 | Reference epoch is start of current GPS week |
| 1 | Reference epoch is time of system startup |
| 2 | Reference epoch is unknown |
| 3 | Reference epoch is last PPS |

Table 6.2.2: Time status values (tow [30:31])

$MSG_IMU_AUX - 0x0901 - 2305$

Auxiliary data specific to a particular IMU. The 'imu_type' field will always be consistent but the rest of the payload is device specific and depends on the value of 'imu_type'.

| Offset (bytes) | Size (bytes) | Format | Units | Name | Description |
|-------------------|-----------------|--------|-------|----------|----------------------|
| 0 | 1 | u8 | | imu_type | IMU type |
| 1 | 2 | s16 | | temp | Raw IMU temperature |
| 3 | 1 | u8 | | imu_conf | IMU configuration |
| | 4 | | | | Total Payload Length |

Field 6.2.3: IMU configuration (imu_conf)

6.3 Logging

Logging and debugging messages from the device.

$MSG_LOG - 0x0401 - 1025$

This message contains a human-readable payload string from the device containing errors, warnings and informational messages at ERROR, WARNING, DEBUG, INFO logging levels.

| Offset (bytes) | Size (bytes) | Format | Units | Name | Description |
|-------------------|-----------------|--------|-------|-------|-----------------------|
| 0 | 1 | u8 | | level | Logging level |
| 1 | N | string | | text | Human-readable string |
| | N + 1 | | | | Total Payload Length |

Table 6.3.1: MSG_LOG 0x0401 message structure

Field 6.3.1: Logging level (level)

| Value | Description |
|-------|-------------|
| 0 | EMERG |
| 1 | ALERT |
| 2 | CRIT |
| 3 | ERROR |
| 4 | WARN |
| 5 | NOTICE |
| 6 | INFO |
| 7 | DEBUG |
| | |

Table 6.3.2: Logging level values (level[0:2])

$MSG_FWD - 0x0402 - 1026$

This message provides the ability to forward messages over SBP. This may take the form of wrapping up SBP messages received by Piksi for logging purposes or wrapping another protocol with SBP.

The source identifier indicates from what interface a forwarded stream derived. The protocol identifier identifies what the expected protocol the forwarded msg contains. Protocol 0 represents SBP and the remaining values are implementation defined.

| Offset (bytes) | Size (bytes) | Format | Units | Name | Description |
|-------------------|-----------------|----------|-------|--------------------|--|
| 0 | 1 1 | u8 u8 | | source protocol | source identifier protocol identifier |
| 2 | N | string | | fwd_payload | variable length wrapped binary message |
| | N+2 | · | _ | | Total Payload Length |

Table 6.3.3: MSG_FWD 0x0402 message structure

6.4 Mag

Magnetometer (mag) messages.

$MSG_MAG_RAW - 0x0902 - 2306$

Raw data from the magnetometer.

| Offset (bytes) | Size (bytes) | Format | Units | Name | Description |
|-------------------|-----------------|--------|-------------|-------|---|
| 0 | 4 | u32 | ms | tow | Milliseconds since start of GPS week. If the high bit is set, the time is unknown or invalid. |
| 4 | 1 | u8 | ms / 256 | tow_f | Milliseconds since start of GPS week, frac- tional part |
| 5 | 2 | s16 | microteslas | mag_x | Magnetic field in the body frame X axis |
| 7 | 2 | s16 | microteslas | mag_y | Magnetic field in the body frame Y axis |
| 9 | 2 | s16 | microteslas | mag_z | Magnetic field in the body frame Z axis |
| | 11 | | | | Total Payload Length |

Table 6.4.1: MSG_MAG_RAW 0x0902 message structure

6.5 Navigation

Geodetic navigation messages reporting GPS time, position, velocity, and baseline position solutions. For position solutions, these messages define several different position solutions: single-point (SPP), RTK, and pseudo-absolute position solutions.

The SPP is the standalone, absolute GPS position solution using only a single receiver. The RTK solution is the differential GPS solution, which can use either a fixed/integer or floating carrier phase ambiguity. The pseudo-absolute position solution uses a user-provided, well-surveyed base station position (if available) and the RTK solution in tandem.

When the inertial navigation mode indicates that the IMU is used, all messages are reported in the vehicle body frame as defined by device settings. By default, the vehicle body frame is configured to be coincident with the antenna phase center. When there is no inertial navigation, the solution will be reported at the phase center of the antenna. There is no inertial navigation capability on Piksi Multi or Duro.

The tow field, when valid, is most often the Time of Measurement. When this is the case, the 5th bit of flags is set to the default value of 0. When this is not the case, the tow may be a time of arrival or a local system timestamp, irrespective of the time reference (GPS Week or else), but not a Time of Measurement.

$MSG_GPS_TIME - 0x0102 - 258$

This message reports the GPS time, representing the time since the GPS epoch began on midnight January 6, 1980 UTC. GPS time counts the weeks and seconds of the week. The weeks begin at the Saturday/Sunday transition. GPS week 0 began at the beginning of the GPS time scale.

Within each week number, the GPS time of the week is between between 0 and 604800 seconds (=60*60*24*7). Note that GPS time does not accumulate leap seconds, and as of now, has a small offset from UTC. In a message stream, this message precedes a set of other navigation messages referenced to the same time (but lacking the ns field) and indicates a more precise time of these messages.

| Offset (bytes) | Size (bytes) | Format | Units | Name | Description |
|-------------------|-----------------|--------|-------|-------------|--|
| 0 | 2 | u16 | weeks | wn | GPS week number |
| 2 | 4 | u32 | ms | tow | GPS time of week rounded to the nearest mil- lisecond |
| 6 | 4 | s32 | ns | ns_residual | Nanosecond residual of millisecond-rounded TOW (ranges from -500000 to 500000) |
| 10 | 1 | u8 | | flags | Status flags (reserved) |
| | 11 | | | | Total Payload Length |

Table 6.5.1: MSG_GPS_TIME 0x0102 message structure

Field 6.5.1: Status flags (reserved) (flags)

| Value | Description | |
|-------|----------------------|--|
| 0 | None (invalid) | |
| 1 | GNSS Solution | |
| 2 | Propagated | |

Table 6.5.2: Time source values (flags[0:2])

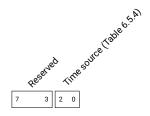

$MSG_GPS_TIME_GNSS - 0x0104 - 260$

This message reports the GPS time, representing the time since the GPS epoch began on midnight January 6, 1980 UTC. GPS time counts the weeks and seconds of the week. The weeks begin at the Saturday/Sunday transition. GPS week 0 began at the beginning of the GPS time scale.

Within each week number, the GPS time of the week is between between 0 and 604800 seconds (=60*60*24*7). Note that GPS time does not accumulate leap seconds, and as of now, has a small offset from UTC. In a message stream, this message precedes a set of other navigation messages referenced to the same time (but lacking the ns field) and indicates a more precise time of these messages.

| Offset (bytes) | Size (bytes) | Format | Units | Name | Description |
|-------------------|-----------------|--------|-------|----------------------|--|
| 0 | 2 | u16 | weeks | wn | GPS week number |
| 2 | 4 | u32 | ms | tow | GPS time of week rounded to the nearest mil- lisecond |
| 6 | 4 | s32 | ns | ${\tt ns_residual}$ | Nanosecond residual of millisecond-rounded TOW (ranges from -500000 to 500000) |
| 10 | 1 | u8 | | flags | Status flags (reserved) |
| | 11 | | | | Total Payload Length |

Table 6.5.3: MSG_GPS_TIME_GNSS 0x0104 message structure

Table 6.5.10: UTC offset source values (flags[3:4])

$MSG_DOPS - 0x0208 - 520$

This dilution of precision (DOP) message describes the effect of navigation satellite geometry on positional measurement precision. The flags field indicated whether the DOP reported corresponds to differential or SPP solution.

| Offset (bytes) | Size (bytes) | Format | Units | Name | Description |
|-------------------|-----------------|--------|-------|-------|---|
| 0 | 4 | u32 | ms | tow | GPS Time of Week |
| 4 | 2 | u16 | 0.01 | gdop | Geometric Dilution of Precision |
| 6 | 2 | u16 | 0.01 | pdop | Position Dilution of Precision |
| 8 | 2 | u16 | 0.01 | tdop | Time Dilution of Precision |
| 10 | 2 | u16 | 0.01 | hdop | Horizontal Dilution of Precision |
| 12 | 2 | u16 | 0.01 | vdop | Vertical Dilution of Precision |

| 5 | Undefined |
| 6 | SBAS Position |

Table 6.5.12: Fix mode values (flags[0:2])

MSG_POS_ECEF - 0x0209 - 521

The position solution message reports absolute Earth Centered Earth Fixed (ECEF) coordinates and the status (single point vs pseudo-absolute RTK) of the position solution. If the rover receiver knows the surveyed position of the base station and has an RTK solution, this reports a pseudo-absolute position solution using the base station position and the rover's RTK baseline vector. The full GPS time is given by the preceding MSG_GPS_TIME with the matching time-of-week (tow).

| Offset (bytes) | Size (bytes) | Format | Units | Name | Description |

$MSG_POS_ECEF_COV - 0x0214 - 532$

The position solution message reports absolute Earth Centered Earth Fixed (ECEF) coordinates and the status (single point vs pseudo-absolute RTK) of the position solution. The message also reports the upper triangular portion of the 3x3 covariance matrix. If the receiver knows the surveyed position of the base station and has an RTK solution, this reports a pseudo-absolute position solution using the base station position and the rover's RTK baseline vector. The full GPS time is given by the preceding MSG_GPS_TIME with the matching time-of-week (tow).

Table 6.5.24: Type of Reported tow values (flags[5:5])

MSG_POS_LLH_COV - 0x0211 - 529

This position solution message reports the absolute geodetic coordinates and the status (single point vs pseudo-absolute RTK) of the position solution as well as the upper triangle of the 3x3 covariance matrix. The position information and Fix Mode flags should follow the MSG_POS_LLH message. Since the covariance matrix is computed in the local-level North, East, Down frame, the covariance terms follow with that convention. Thus, covariances are reported against the "downward" measurement and care should be taken with the sign convention.

| Offset (bytes) | Size (bytes) | Format | Units | Name | Description |

$MSG_POS_ECEF_GNSS - 0x0229 - 553$

The position solution message reports absolute Earth Centered Earth Fixed (ECEF) coordinates and the status (single point vs pseudo-absolute RTK) of the position solution. If the rover receiver knows the surveyed position of the base station and has an RTK solution, this reports a pseudo-absolute position solution using the base station position and the rover's RTK baseline vector. The full GPS time is given by the preceding MSG_GPS_TIME with the matching time-of-week (tow).

| Offset (bytes) | Size (bytes) | Format | Units | Name | Description |

$MSG_POS_LLH_GNSS - 0x022A - 554$

This position solution message reports the absolute geodetic coordinates and the status (single point vs pseudo-absolute RTK) of the position solution. If the rover receiver knows the surveyed position of the base station and has an RTK solution, this reports a pseudo-absolute position solution using the base station position and the rover's RTK baseline vector. The full GPS time is given by the preceding MSG_GPS_TIME with the matching time-of-week (tow).

| Offset (bytes) | Size (bytes) | Format | Units | Name | Description |

Table 6.5.54: Fix mode values (flags[0:2])

MSG_POS_LLH_COV_GNSS - 0x0231 - 561

This position solution message reports the absolute geodetic coordinates and the status (single point vs pseudo-absolute RTK) of the position solution as well as the upper triangle of the 3x3 covariance matrix. The position information and Fix Mode flags should follow the MSG_POS_LLH message. Since the covariance matrix is computed in the local-level North, East, Down frame, the covariance terms follow with that convention. Thus, covariances are reported against the "downward" measurement and care should be taken with the sign convention.

Table 6.5.64: Velocity mode values (flags[0:2])

$MSG_VEL_BODY - 0x0213 - 531$

This message reports the velocity in the Vehicle Body Frame. By convention, the x-axis should point out the nose of the vehicle and represent the forward direction, while as the y-axis should point out the right hand side of the vehicle. Since this is a right handed system, z should point out the bottom of the vehicle. The orientation and origin of the Vehicle Body Frame are specified via the device settings. The full GPS time is given by the preceding MSG_GPS_TIME with the matching time-of-week (tow). This message is only produced by inertial versions of Swift products and is not available from Piksi Multi or Duro.

| Offset (bytes) | Size (bytes) | Format | Units | Name | Description |
|-------------------|-----------------|--------|-------|---------|---------------------------------------|
| 0 | 4 | u32 | ms | tow | GPS Time of Week |

Table 6.5.68: MSG_AGE_CORRECTIONS 0x0210 message structure

6.6 Observation

Satellite observation messages from the device. The SBP sender ID of 0 indicates remote observations from a GNSS base station, correction network, or Skylark, Swift's cloud GNSS correction product.

$MSG_OBS - 0x004A - 74$

The GPS observations message reports all the raw pseudorange and carrier phase observations for the satellites being tracked by the device. Carrier phase observation here is represented as a 40-bit fixed point number with Q32.8 layout (i.e. 32-bits of whole cycles and 8-bits of fractional cycles). The observations are be interoperable with 3rd party receivers and conform with typical RTCMv3 GNSS observations.

| Offset (bytes) | Size (bytes) | Format | Units | Name | Description |
|-------------------|-----------------|--------|--------------|----------------------|--|
| 0 | 4 | u32 | ms | header.t.tow | Milliseconds since start of GPS week |
| 4 | 4 | s32 | ns | header.t.ns_residual | Nanosecond residual of millisecond-rounded TOW (ranges from -500000 to 500000) |
| 8 | 2 | u16 | week | header.t.wn | GPS week number |
| 10 | 1 | u8 | | header.n_obs | Total number of observations. First nibble is the size of the sequence (n), second nibble is the zero-indexed counter (ith packet of n) |
| 17N + 11 | 4 | u32 | 2 cm | obs[N].P | Pseudorange observation |
| 17N + 15 | 4 | s32 | cycles | obs[N].L.i | Carrier phase whole cycles |
| 17N + 19 | 1 | u8 | cycles / 256 | obs[N].L.f | Carrier phase fractional part |
| 17N + 20 | 2 | s16 | Hz | obs[N].D.i | Doppler whole Hz |
| 17N + 22 | 1 | u8 | Hz / 256 | obs[N].D.f | Doppler fractional part |
| 17N + 23 | 1 | u8 | dB Hz / 4 | obs[N].cn0 | Carrier-to-Noise density. Zero implies invalid cn0. |
| 17N + 24 | 1 | u8 | | obs[N].lock | Lock timer. This value gives an indication of the time for which a signal has maintained continuous phase lock. Whenever a signal has lost and regained lock, this value is reset to zero. It is encoded according to DF402 from the RTCM 10403.2 Amendment 2 specification. Valid values range from 0 to 15 and the most significant nibble is reserved for future use. |
| 17N + 25 | 1 | u8 | | obs[N].flags | Measurement status flags. A bit field of flags providing the status of this observation. If this field is 0 it means only the Cn0 estimate for the signal is valid. |
| 17N + 26 | 1 | u8 | | obs[N].sid.sat | Constellation-specific satellite identifier. This field for Glonass can either be (100+FCN) where FCN is in [-7,+6] or the Slot ID in [1,28] |
| 17N + 27 | 1 | u8 | | obs[N].sid.code | Signal constellation, band and code |
| | 17N + 11 | | | | Total Payload Length |

Table 6.6.25: values (common.sid.code[0:7])

$MSG_EPHEMERIS_GLO_DEP_A - 0x0083 - 131$

The ephemeris message returns a set of satellite orbit parameters that is used to calculate GLO satellite position, velocity, and clock offset. Please see the GLO ICD 5.1 "Table 4.5 Characteristics of words of immediate information (ephemeris parameters)" for more details.

| Offset (bytes) | Size (bytes) | Format | Units | Name | Description |
|-------------------|-----------------|-----------|-------|---------------------|---|
| 0 | 2 | u16 | | common.sid.sat | Constellation-specific satellite identifier. Note: unlike GnssSignal, GPS satellites are encoded as (PRN - 1). Other constellations do not have this offset. |
| 2 | 1 | u8 | | common.sid.code | Signal constellation, band and code |
| 3 | 1 | u8 | | common.sid.reserved | Reserved |
| 4 | 4 | u32 | ms | common.toe.tow | Milliseconds since start of GPS week |
| 8 | 2 | u16 | week | common.toe.wn | GPS week number |
| 10 | 8 | double | m | common.ura | User Range Accuracy |
| 18 | 4 | u32 | s | common.fit_interval | Curve fit interval |
| 22 | 1 | u8 | | common.valid | Status of ephemeris, 1 = valid, 0 = invalid |
| 23 | 1 | u8 | | common.health_bits | Satellite health status. GPS: ICD-GPS-200, chapter 20.3.3.3.1.4 SBAS: 0 = valid, non-zero = invalid GLO: 0 = valid, non-zero = invalid |
| 24 | 8 | double | | gamma | Relative deviation of predicted carrier frequency from nominal |
| 32 | 8 | double | s | tau | Correction to the SV time |
| 40 | 24 | double[3] | m | pos | Position of the SV at tb in PZ-90.02 coordinates system |
| 64 | 24 | double[3] | m/s | vel | Velocity vector of the SV at tb in PZ-90.02 co- ordinates system |
| 88 | 24 | double[3] | m/s^2 | acc | Acceleration vector of the SV at tb in PZ-90.02 coordinates sys |
| | 112 | | | | Total Payload Length |

Table 6.6.47: values (sid.code[0:7])

$MSG_ALMANAC_GPS - 0x0072 - 114$

The almanac message returns a set of satellite orbit parameters. Almanac data is not very precise and is considered valid for up to several months. Please see the Navstar GPS Space Segment/Navigation user interfaces (ICD-GPS-200, Chapter 20.3.3.5.1.2 Almanac Data) for more details.

| Offset (bytes) | Size (bytes) | Format | Units | Name | Description |
|-------------------|-----------------|--------|---------|------------------------------|--|
| 0 | 1 | u8 | | common.sid.sat | Constellation-specific satellite identifier. This field for Glonass can either be (100+FCN) where FCN is in [-7,+6] or the Slot ID in [1,28] |
| 1 | 1 | u8 | | common.sid.code | Signal constellation, band and code |
| 2 | 4 | u32 | S | common.toa.tow | Seconds since start of GPS week |
| 6 | 2 | u16 | week | common.toa.wn | GPS week number |
| 8 | 8 | double | m | common.ura | User Range Accuracy |
| 16 | 4 | u32 | S | ${\tt common.fit_interval}$ | Curve fit interval |
| 20 | 1 | u8 | | common.valid | Status of almanac, 1 = valid, 0 = invalid |
| 21 | 1 | u8 | | common.health_bits | Satellite health status for GPS: - bits 5-7: NAV data health status. See IS-GPS-200H Table 20-VII: NAV Data Health Indications bits 0-4: Signal health status. See IS-GPS-200H Table 20-VIII. Codes for Health of SV Signal Components. Satellite health status for GLO: See GLO ICD 5.1 table 5.1 for details - bit 0: C(n), "unhealthy" flag that is transmitted within non-immediate data and indicates overall constellation status at the moment of almanac uploading. '0' indicates malfunction of n-satellite. '1' indicates that n-satellite is operational bit 1: Bn(ln), '0' indicates the satellite is operational and suitable for navigation. |
| 22 | 8 | double | rad | mO | Mean anomaly at reference time |
| 30 | 8 | double | | ecc | Eccentricity of satellite orbit |
| 38 | 8 | double | m^(1/2) | sqrta | Square root of the semi-major axis of orbit |
| 46 | 8 | double | rad | omega0 | Longitude of ascending node of orbit plane at weekly epoch |
| 54 | 8 | double | rad/s | omegadot | Rate of right ascension |
| 62 | 8 | double | rad | w | Argument of perigee |
| 70 | 8 | double | rad | inc | Inclination |

Table 6.6.54: values (sid.code[0:7])

$MSG_OSR - 0x0640 - 1600$

The OSR message contains network corrections in an observation-like format

| Offset (bytes) | Size (bytes) | Format | Units | Name | Description |
|-------------------|-----------------|--------|--------------|---------------------------------|--|
| 0 | 4 | u32 | ms | header.t.tow | Milliseconds since start of GPS week |
| 4 | 4 | s32 | ns | header.t.ns_residual | Nanosecond residual of millisecond-rounded TOW (ranges from -500000 to 500000) |
| 8 | 2 | u16 | week | header.t.wn | GPS week number |
| 10 | 1 | u8 | | header.n_obs | Total number of observations. First nibble is the size of the sequence (n), second nibble is the zero-indexed counter (ith packet of n) |
| 19N + 11 | 4 | u32 | 2 cm | obs[N].P | Pseudorange observation |
| 19N + 15 | 4 | s32 | cycles | obs[N].L.i | Carrier phase whole cycles |
| 19N + 19 | 1 | u8 | cycles / 256 | obs[N].L.f | Carrier phase fractional part |
| 19N + 20 | 1 | u8 | | obs[N].lock | Lock timer. This value gives an indication of the time for which a signal has maintained continuous phase lock. Whenever a signal has lost and regained lock, this value is reset to zero. It is encoded according to DF402 from the RTCM 10403.2 Amendment 2 specification. Valid values range from 0 to 15 and the most significant nibble is reserved for future use. |
| 19N + 21 | 1 | u8 | | ${	t obs} [{	t N}]. {	t flags}$ | Correction flags. |
| 19N + 22 | 1 | u8 | | obs[N].sid.sat | Constellation-specific satellite identifier. This field for Glonass can either be (100+FCN) where FCN is in [-7,+6] or the Slot ID in [1,28] |
| 19N + 23 | 1 | u8 | | obs[N].sid.code | Signal constellation, band and code |
| 19N + 24 | 2 | u16 | 5 mm | obs[N].iono_std | Slant ionospheric correction standard deviation |
| 19N + 26 | 2 | u16 | 5 mm | obs[N].tropo_std | Slant tropospheric correction standard deviation |
| 19N + 28 | 2 | u16 | 5 mm | ${\tt obs[N].range_std}$ | Orbit/clock/bias correction projected on range standard deviation |
| | 19N + 11 | | | | Total Payload Length |

6.7 Settings

Messages for reading, writing, and discovering device settings. Settings with a "string" field have multiple values in this field delimited with a null character (the c style null terminator). For instance, when querying the 'firmware_version' setting in the 'system_info' section, the following array of characters needs to be sent for the string field in MSG_SETTINGS_READ: "system_info\0firmware_version\0", where the delimiting null characters are specified with the escape sequence '\0' and all quotation marks should be omitted.

In the message descriptions below, the generic strings SECTION_SETTING and SETTING are used to refer to the two strings that comprise the identifier of an individual setting. In firmware_version example above, SECTION_SETTING is the 'system_info', and the SETTING portion is 'firmware_version'.

See the "Software Settings Manual" on support.swiftnav.com for detailed documentation about all settings and sections available for each Swift firmware version. Settings manuals are available for each firmware version at the following link: Piksi Multi Specifications. The latest settings document is also available at the following link: Latest settings document. See lastly settings.py, the open source python command line utility for reading, writing, and saving settings in the piksi_tools repository on github as a helpful reference and example.

MSG_SETTINGS_SAVE - 0x00A1 - 161

The save settings message persists the device's current settings configuration to its onboard flash memory file system.

| Offset (bytes) | Size (bytes) | Format | Units | Name | Description |
|-------------------|-----------------|--------|-------|------|----------------------|
| | 0 | | | | Total Payload Length |

Table 6.7.1: MSG_SETTINGS_SAVE 0x00A1 message structure

MSG_SETTINGS_WRITE - 0x00A0 - 160

The setting message writes the device configuration for a particular setting via A NULL-terminated and NULL-delimited string with contents "SECTION_SETTING\0SETTING\0VALUE\0" where the '\0' escape sequence denotes the NULL character and where quotation marks are omitted. A device will only process to this message when it is received from sender ID 0x42. An example string that could be sent to a device is "solution\0soln_freq\010\0".

| Offset (bytes) | Size (bytes) | Format | Units | Name | Description |
|-------------------|-----------------|--------|-------|---------|--|
| 0 | N | string | | setting | A NULL-terminated and NULL- delimited string with contents "SEC- TION_SETTING\0SETTING\0VALUE\0" |
| | N | | | | Total Payload Length |

Table 6.7.2: MSG_SETTINGS_WRITE 0x00A0 message structure

MSG_SETTINGS_WRITE_RESP - 0x00AF - 175

Return the status of a write request with the new value of the setting. If the requested value is rejected, the current value will be returned. The string field is a NULL-terminated and NULL-delimited string with contents "SECTION_SETTING\0SETTING\0VALUE\" where the '\0' escape sequence denotes the NULL character and where quotation marks are omitted. An example string that could be sent from device is "solution\0soln_freq\010\0".

| Offset (bytes) | Size (bytes) | Format | Units | Name | Description |
|-------------------|-----------------|--------------|-------|-------------------|--|
| 0 1 | 1 N | u8 string | | status setting | Write status A NULL-terminated and delim- ited string with contents "SEC- TION_SETTING\0SETTING\0VALUE\0" |
| | N + 1 | | | | Total Payload Length |

Table 6.7.3: MSG_SETTINGS_WRITE_RESP 0x00AF message structure

Field 6.7.1: Write status (status)

| Value | Description |
|-------|--|
| 0 | Accepted; value updated |
| 1 | Rejected; value unparsable or out-of-range |
| 2 | Rejected; requested setting does not exist |
| 3 | Rejected; setting name could not be parsed |
| 4 | Rejected; setting is read only |
| 5 | Rejected; modification is temporarily disabled |
| 6 | Rejected; unspecified error |

Table 6.7.4: Write status values (status[0:1])

MSG_SETTINGS_READ_REQ - 0x00A4 - 164

The setting message that reads the device configuration. The string field is a NULL-terminated and NULL-delimited string with contents "SECTION_SETTING\0SETTING\0" where the '\0' escape sequence denotes the NULL character and where quotation marks are omitted. An example string that could be sent to a device is "solution\0soln_freq\0". A device will only respond to this message when it is received from sender ID 0x42. A device should respond with a MSG_SETTINGS_READ_RESP message (msg_id 0x00A5).

| Offset (bytes) | Size (bytes) | Format | Units | Name | Description |
|-------------------|-----------------|--------|-------|---------|---|
| 0 | N | string | | setting | A NULL-terminated and NULL- delimited string with contents "SEC- TION_SETTING\0SETTING\0" |
| | N | | | | Total Payload Length |

Table 6.7.5: MSG_SETTINGS_READ_REQ 0x00A4 message structure

MSG_SETTINGS_READ_RESP - 0x00A5 - 165

The setting message wich which the device responds after a MSG_SETTING_READ_REQ is sent to device. The string field is a NULL-terminated and NULL-delimited string with contents "SECTION_SETTING\0SETTING\0VALUE\0" where the '\0' escape sequence denotes the NULL character and where quotation marks are omitted. An example string that could be sent from device is "solution\0soln_freq\010\0".

| Offset (bytes) | Size (bytes) | Format | Units | Name | Description |
|-------------------|-----------------|--------|-------|---------|--|
| 0 | N | string | | setting | A NULL-terminated and NULL- delimited string with contents "SEC- TION_SETTING\0SETTING\0VALUE\0" |
| | N | | | | Total Payload Length |

Table 6.7.6: MSG_SETTINGS_READ_RESP 0x00A5 message structure

$MSG_SETTINGS_READ_BY_INDEX_REQ - 0x00A2 - 162$

The settings message for iterating through the settings values. A device will respond to this message with a "MSG_SETTINGS_READ

| Offset (bytes) | Size (bytes) | Format | Units | Name | Description |
|-------------------|-----------------|--------|-------|-------|---|
| 0 | 2 | u16 | | index | An index into the device settings, with values ranging from 0 to length(settings) |
| | 2 | | | | Total Payload Length |

Table 6.7.7: MSG_SETTINGS_READ_BY_INDEX_REQ 0x00A2 message structure

$MSG_SETTINGS_READ_BY_INDEX_RESP - 0x00A7 - 167$

The settings message that reports the value of a setting at an index.

In the string field, it reports NULL-terminated and delimited string with contents "SECTION_SETTING\0SETTING\0VALUE\0FORM where the '\0' escape sequence denotes the NULL character and where quotation marks are omitted. The FORMAT_TYPE field is optional and denotes possible string values of the setting as a hint to the user. If included, the format type portion of the string has the format "enum:value1,value2,value3". An example string that could be sent from the device is "simulator\0enabled\0True\0enabled\0enabled\0True\0enabled\0enable

| Offset (bytes) | Size (bytes) | Format | Units | Name | Description |
|-------------------|-----------------|--------|-------|---------|--|
| 0 | 2 | u16 | | index | An index into the device settings, with values ranging from 0 to length(settings) |
| 2 | N | string | | setting | A NULL-terminated and delim- ited string with contents "SEC- TION_SETTING\0SETTING\0VALUE\0F0RMAT_TYPE\0 |
| | N+2 | | | | Total Payload Length |

Table 6.7.8: MSG_SETTINGS_READ_BY_INDEX_RESP 0x00A7 message structure

${\bf MSG_SETTINGS_READ_BY_INDEX_DONE-0x00A6-166}$

The settings message for indicating end of the settings values.

| Offset (bytes) | Size (bytes) | Format | Units | Name | Description |
|-------------------|-----------------|--------|-------|------|----------------------|
| | 0 | | | | Total Payload Length |

Table 6.7.9: MSG_SETTINGS_READ_BY_INDEX_DONE 0x00A6 message structure

6.8 Solution Meta

Standardized Metadata messages for Fuzed Solution from Swift Navigation devices.

MSG_SOLN_META - 0xFF0E - 65294

This message contains all metadata about the sensors received and/or used in computing the sensorfusion solution. It focuses primarly, but not only, on GNSS metadata. Regarding the age of the last received valid GNSS solution, the highest two bits are time status, indicating whether age gnss can or can not be used to retrieve time of measurement (noted TOM, also known as time of validity) If it can, substract 'age gnss' from 'tow' in navigation messages to get TOM. Can be used before alignment is complete in the Fusion Engine, when output solution is the last received valid GNSS solution and its tow is not a TOM.

| Offset (bytes) | Size (bytes) | Format | Units | Name | Description |
|-------------------|-----------------|--------|---------------|-----------------------|--|
| 0 | 4 | u32 | ms | tow | GPS time of week rounded to the nearest millisecond |
| 4 | 2 | u16 | 0.01 | pdop | Position Dilution of Precision as per last avail- able DOPS from PVT engine (0xFFFF indi- cates invalid) |
| 6 | 2 | u16 | 0.01 | hdop | Horizontal Dilution of Precision as per last available DOPS from PVT engine (0xFFFF indicates invalid) |
| 8 | 2 | u16 | 0.01 | vdop | Vertical Dilution of Precision as per last avail- able DOPS from PVT engine (0xFFFF indi- cates invalid) |
| 10 | 2 | u16 | deciseconds | age_corrections | Age of corrections as per last available AGE_CORRECTIONS from PVT engine (0xFFFF indicates invalid) |
| 12 | 4 | u32 | ms | age_gnss | Age and Time Status of the last received valid GNSS solution. |
| 2N + 16 | 1 | u8 | | sol_in[N].sensor_type | The type of sensor |
| 2N + 17 | 1 | u8 | (XX)InputType | V - | Refer to each InputType description |
| | 2N + 16 | | | | Total Payload Length |

Table 6.8.1: MSG_SOLN_META 0xFF0E message structure

6.9 System

Standardized system messages from Swift Navigation devices.

MSG_STARTUP - 0xFF00 - 65280

The system start-up message is sent once on system start-up. It notifies the host or other attached devices that the system has started and is now ready to respond to commands or configuration requests.

| Offset (bytes) | Size (bytes) | Format | Units | Name | Description |
|-------------------|-----------------|--------|-------|--------------|----------------------|
| 0 | 1 | u8 | | cause | Cause of startup |
| 1 | 1 | u8 | | startup_type | Startup type |

Table 6.9.5: Differential type values (flags[0:3])

MSG_HEARTBEAT - 0xFFFF - 65535

The heartbeat message is sent periodically to inform the host or other attached devices that the system is running. It is used to monitor system malfunctions. It also contains status flags that indicate to the host the status of the system and whether it is operating correctly. Currently, the expected heartbeat interval is 1 sec.

The system error flag is used to indicate that an error has occurred in the system. To determine the source of the error, the remaining error flags should be inspected.

| Offset (bytes) | Size (bytes) | Format | Units | Name | Description |

Table 6.9.14: Generic values (generic [0:7])

MSG_STATUS_REPORT - 0xFFFE - 65534

The status report is sent periodically to inform the host or other attached devices that the system is running. It is used to monitor system malfunctions. It contains status reports that indicate to the host the status of each sub-system and whether it is operating correctly.

Interpretation of the subsystem specific status code is product dependent, but if the generic status code is initializing, it should be ignored. Refer to product documentation for details.

| Offset (bytes) | Size (bytes) | Format | Units | Name | Description |
|-------------------|-----------------|--------|-------|---------------------|---|
| 0 | 2 | u16 | | reporting_system | Identity of reporting system |

Field 6.9.10: Status flags (flags)

MSG_GNSS_TIME_OFFSET - 0xFF07 - 65287

The GNSS time offset message contains the information that is needed to translate messages tagged with a local timestamp (e.g. IMU or wheeltick messages) to GNSS time for the sender producing this message.

| Offset (bytes) | Size (bytes) | Format | Units | Name | Description |
|-------------------|-----------------|--------|--------------|--------------|---|
| 0 | 2 | s16 | weeks | weeks | Weeks portion of the time offset |
| 2 | 4 | s32 | ms | milliseconds | Milliseconds portion of the time offset |
| 6 | 2 | s16 | microseconds | microseconds | Microseconds portion of the time offset |
| 8 | 1 | u8 | | flags | Status flags (reserved) |
| | 9 | | | | Total Payload Length |

Table 6.9.27: MSG_GNSS_TIME_OFFSET 0xFF07 message structure

MSG_GROUP_META - 0xFF0A - 65290

This leading message lists the time metadata of the Solution Group. It also lists the atomic contents (i.e. types of messages included) of the Solution Group.

| Offset (bytes) | Size (bytes) | Format | Units | Name | Description |
|-------------------|-----------------|--------|-------|--------------|--|
| 0 | 1 | u8 | | group_id | Id of the Msgs Group, 0 is Unknown, 1 is Best- pos, 2 is Gnss |
| 1 | 1 | u8 | | flags | Status flags (reserved) |
| 2 | 1 | u8 | | n_group_msgs | Size of list group_msgs |
| 3 | N | u16[N] | | group_msgs | An inorder list of message types included in the Solution Group, including GROUP_META itself |

7 Draft Message Definitions

7.1 Acquisition

Satellite acquisition messages from the device.

MSG ACQ RESULT - 0x002F - 47

This message describes the results from an attempted GPS signal acquisition search for a satellite PRN over a code phase/carrier frequency range. It contains the parameters of the point in the acquisition search space with the best carrier-to-noise (CN/0) ratio.

| Offset (bytes) | Size (bytes) | Format | Units | Name | Description |
|----------------|--------------|--------|-------|----------|--|
| 0 | 4 | float | dB Hz | cn0 | CN/0 of best point |
| 4 | 4 | float | chips | ср | Code phase of best point |
| 8 | 4 | float | hz | cf | Carrier frequency of best point |
| 12 | 1 | u8 | | sid.sat | Constellation-specific satellite identifier. This field for Glonass can either be (100+FCN) where FCN is in [-7,+6] or the Slot ID in [1,28] |
| 13 | 1 | u8 | | sid.code | Signal constellation, band and code |
| | 14 | | | | Total Payload Length |

7.2 File IO

Messages for using device's onboard flash filesystem functionality. This allows data to be stored persistently in the device's program flash with wear-levelling using a simple filesystem interface. The file system interface (CFS) defines an abstract API for reading directories and for reading and writing files.

Note that some of these messages share the same message type ID for both the host request and the device response.

MSG FILEIO READ REQ - 0x00A8 - 168

The file read message reads a certain length (up to 255 bytes) from a given offset into a file, and returns the data in a MSG_FILEIO_READ_RESP message where the message length field indicates how many bytes were successfully read. The sequence number in the request will be returned in the response. If the message is invalid, a followup MSG_PRINT message will print "Invalid fileio read message". A device will only respond to this message when it is received from sender ID 0x42.

| Offset (bytes) | Size (bytes) | Format | Units | Name | Description |
|----------------|--------------|------------------|----------------|----------------------------------|---|
| 0 4 8 | 4 4 1 | u32 u32 u8 | bytes bytes | sequence offset chunk_size | Read sequence number File offset Chunk size to read |
| 9 | N | string | | filename | Name of the file to read from |
| | N + 9 | | | | Total Payload Length |

Table 7.2.1: MSG_FILEIO_READ_REQ 0x00A8 message structure

MSG FILEIO READ RESP - 0x00A3 - 163

The file read message reads a certain length (up to 255 bytes) from a given offset into a file, and returns the data in a message where the message length field indicates how many bytes were successfully read. The sequence number in the response is preserved from the request.

| Offset (bytes) | Size (bytes) | Format | Units | Name | Description |
|----------------|--------------|--------------|-------|----------------------|---|
| 0 4 | 4 N | u32 u8[N] | | sequence contents | Read sequence number Contents of read file |
| | N + 4 | | | | Total Payload Length |

Table 7.2.2: MSG_FILEIO_READ_RESP 0x00A3 message structure

MSG FILEIO READ DIR REQ - 0x00A9 - 169

The read directory message lists the files in a directory on the device's onboard flash file system. The offset parameter can be used to skip the first n elements of the file list. Returns a MSG_FILEIO_READ_DIR_RESP message containing the directory listings as a NULL delimited list. The listing is chunked over multiple SBP packets. The sequence number in the request will be returned in the response. If message is invalid, a followup MSG_PRINT message will print "Invalid fileio read message". A device will only respond to this message when it is received from sender ID 0x42.

| Offset (bytes) | Size (bytes) | Format | Units | Name | Description |
|----------------|--------------|--------|-------|-----------------------------------|--|
| 0 | 4 | u32 | | sequence | Read sequence number |
| 4 | 4 | u32 | | offset | The offset to skip the first n elements of the file list |
| 8 | N | string | | $\operatorname{\mathtt{dirname}}$ | Name of the directory to list |
| | N + 8 | | | | Total Payload Length |

Table 7.2.3: MSG_FILEIO_READ_DIR_REQ 0x00A9 message structure

MSG FILEIO READ DIR RESP — 0x00AA — 170

The read directory message lists the files in a directory on the device's onboard flash file system. Message contains the directory listings as a NULL delimited list. The listing is chunked over multiple SBP packets and the end of the list is identified by an entry containing just the character 0xFF. The sequence number in the response is preserved from the request.

| Offset (bytes) | Size (bytes) | Format | Units | Name | Description |
|----------------|--------------|--------------|-------|------|--|
| 0 4 | 4 N | u32 u8[N] | | - | Read sequence number Contents of read directory |
| | N+4 | | | | Total Payload Length |

Table 7.2.4: MSG_FILEIO_READ_DIR_RESP 0x00AA message structure

MSG FILEIO REMOVE - 0x00AC - 172

The file remove message deletes a file from the file system. If the message is invalid, a followup MSG_PRINT message will print "Invalid fileio remove message". A device will only process this message when it is received from sender ID 0x42.

| Offset (bytes) | Size (bytes) | Format | Units | Name | Description |
|----------------|--------------|--------|-------|----------|----------------------------|
| 0 | N | string | | filename | Name of the file to delete |
| | N | | | | Total Payload Length |

Table 7.2.5: MSG_FILEIO_REMOVE 0x00AC message structure

MSG FILEIO WRITE REQ - 0x00AD - 173

The file write message writes a certain length (up to 255 bytes) of data to a file at a given offset. Returns a copy of the original MSG_FILEIO_WRITE_RESP message to check integrity of the write. The sequence number in the request will be returned in the response. If message is invalid, a followup MSG_PRINT message will print "Invalid fileio write message". A device will only process this message when it is received from sender ID 0x42.

| Offset (bytes) | Size (bytes) | Format | Units | Name | Description |
|----------------|--------------|-----------------|-------|------------------|--|
| 0 | 4 | u32 | | sequence | Write sequence number |
| 4 | 4 | u32 | bytes | offset | Offset into the file at which to start writing in bytes |
| 8 9 | N N | string u8[N] | | filename data | Name of the file to write to Variable-length array of data to write |
| | | uo[iv] | | uata | |
| | N + 9 | | | | Total Payload Length |

Table 7.2.6: MSG_FILEIO_WRITE_REQ 0x00AD message structure

MSG FILEIO WRITE RESP — 0x00AB — 171

The file write message writes a certain length (up to 255 bytes) of data to a file at a given offset. The message is a copy of the original MSG_FILEIO_WRITE_REQ message to check integrity of the write. The sequence number in the response is preserved from the request.

| Offset (bytes) | Size (bytes) | Format | Units | Name | Description |
|----------------|--------------|--------|-------|----------|-----------------------|
| 0 | 4 | u32 | | sequence | Write sequence number |
| | 4 | | | | Total Payload Length |

Table 7.2.7: MSG_FILEIO_WRITE_RESP 0x00AB message structure

MSG FILEIO CONFIG REQ - 0x1001 - 4097

Requests advice on the optimal configuration for a FileIO transfer. Newer version of FileIO can support greater throughput by supporting a large window of FileIO data that can be in-flight during read or write operations.

| Offset (bytes) | Size (bytes) | Format | Units | Name | Description |
|----------------|--------------|--------|-------|----------|------------------------|
| 0 | 4 | u32 | | sequence | Advice sequence number |
| | 4 | | | | Total Payload Length |

Table 7.2.8: MSG_FILEIO_CONFIG_REQ 0x1001 message structure

MSG FILEIO CONFIG RESP - 0x1002 - 4098

The advice on the optimal configuration for a FilelO transfer. Newer version of FilelO can support greater throughput by supporting a large window of FilelO data that can be in-flight during read or write operations.

| Offset (bytes) | Size (bytes) | Format | Units | Name | Description |
|----------------|--------------|--------|-------|----------------|--|
| 0 | 4 | u32 | | sequence | Advice sequence number |
| 4 | 4 | u32 | | window_size | The number of SBP packets in the data in-flight window |
| 8 | 4 | u32 | | batch_size | The number of SBP packets sent in one PDU |
| 12 | 4 | u32 | | fileio_version | The version of FileIO that is supported |
| | 16 | | | | Total Payload Length |

Table 7.2.9: MSG_FILEIO_CONFIG_RESP 0x1002 message structure

7.3 Orientation

Orientation Messages

MSG BASELINE HEADING - 0x020F - 527

This message reports the baseline heading pointing from the base station to the rover relative to True North. The full GPS time is given by the preceding MSG_GPS_TIME with the matching time-of-week (tow). It is intended that time-matched RTK mode is used when the base station is moving.

| Offset (bytes) | Size (bytes) | Format | Units | Name | Description |
|----------------|--------------|--------|-------|-----------|---------------------------------------|
| 0 | 4 | u32 | ms | tow | GPS Time of Week |
| 4 | 4 | u32 | mdeg | heading | Heading |
| 8 | 1 | u8 | | n_sats | Number of satellites used in solution |
| 9 | 1 | u8 | | flags | Status flags |
| | 10 | | | | Total Payload Length |

| 4 | Fixed RTK |

Table 7.3.2: Fix mode values (flags[0:2])

MSG ORIENT QUAT - 0x0220 - 544

This message reports the quaternion vector describing the vehicle body frame's orientation with respect to a local-level NED frame. The components of the vector should sum to a unit vector assuming that the LSB of each component as a value of 2^-31. This message will only be available in future INS versions of Swift Products and is not produced by Piksi Multi or Duro.

| Offset (bytes) | Size (bytes) | Format | Units | Name | Description |
|----------------|--------------|--------|-------|------------|-----------------------------------|
| 0 | 4 | u32 | ms | tow | GPS Time of Week |
| 4 | 4 | s32 | 2^-31 | W | Real component |
| 8 | 4 | s32 | 2^-31 | x | 1st imaginary component |
| 12 | 4 | s32 | 2^-31 | у | 2nd imaginary component |
| 16 | 4 | s32 | 2^-31 | z | 3rd imaginary component |
| 20 | 4 | float | N/A | w_accuracy | Estimated standard deviation of w |
| 24 | 4 | float | N/A | x_accuracy | Estimated standard deviation of x |

| Value | Description |
|-------|-------------|
| 0 | Invalid |
| 1 | Valid |

Table 7.3.4: INS Navigation mode values (flags[0:2])

MSG ORIENT EULER - 0x0221 - 545

This message reports the yaw, pitch, and roll angles of the vehicle body frame. The rotations should applied intrinsically in the order yaw, pitch, and roll in order to rotate the from a frame aligned with the local-level NED frame to the vehicle body frame. This message will only be available in future INS versions of Swift Products and is not produced by Piksi Multi or Duro.

| Offset (bytes) | Size (bytes) | Format | Units | Name | Description |
|----------------|--------------|--------|--------------|----------------|--|
| 0 | 4 | u32 | ms | tow | GPS Time of Week |
| 4 | 4 | s32 | microdegrees | roll | rotation about the forward axis of the vehicle |
| 8 | 4 | s32 | microdegrees | pitch | rotation about the rightward axis of the vehicle |
| 12 | 4 | s32 | microdegrees | yaw | rotation about the downward axis of the vehicle |
| 16 | 4 | float | degrees | roll_accuracy | Estimated standard deviation of roll |

Table 7.3.6: INS Navigation mode values (flags[0:2])

MSG ANGULAR RATE - 0x0222 - 546

This message reports the orientation rates in the vehicle body frame. The values represent the measurements a strapped down gyroscope would make and are not equivalent to the time derivative of the Euler angles. The orientation and origin of the user frame is specified via device settings. By convention, the vehicle x-axis is expected to be aligned with the forward direction, while the vehicle y-axis is expected to be aligned with the right direction, and the vehicle z-axis should be aligned with the down direction. This message will only be available in future INS versions of Swift Products and is not produced by Piksi Multi or Duro.

| Offset (bytes) | Size (bytes) | Format | Units | Name | Description |
|----------------|--------------|--------|----------------|-------|---------------------------|
| 0 | 4 | u32 | ms | tow | GPS Time of Week |
| 4 | 4 | s32 | microdegrees/s | x | angular rate about x axis |
| 8 | 4 | s32 | microdegrees/s | У | angular rate about y axis |
| 12 | 4 | s32 | microdegrees/s | z | angular rate about z axis |

Table 7.4.10: MSG_INIT_BASE_DEP 0x0023 message structure

MSG THREAD STATE — 0x0017 — 23

The thread usage message from the device reports real-time operating system (RTOS) thread usage statistics for the named thread. The reported percentage values must be normalized.

| Offset (bytes) | Size (bytes) | Format | Units | Name | Description |
|----------------|--------------|--------|-------|---------------------|--|
| 0 | 20 | string | | name | Thread name (NULL terminated) |
| 20 | 2 | u16 | | сри | Percentage cpu use for this thread. Values range from 0 - 1000 and needs to be renormalized to 100 |
| 22 | 4 | u32 | bytes | ${\tt stack_free}$ | Free stack space for this thread |
| | 26 | | | | Total Payload Length |

Table 7.4.11: MSG_THREAD_STATE 0x0017 message structure

MSG UART STATE - 0x001D - 29

The UART message reports data latency and throughput of the UART channels providing SBP I/O. On the default Piksi configuration, UARTs A and B are used for telemetry radios, but can also be host access ports for embedded hosts, or other interfaces in future. The reported percentage values must be normalized. Observations latency and period can be used to assess the health of the differential corrections link. Latency provides the timeliness of received base observations while the period indicates their likelihood of transmission.

| Offset (bytes) | Size (bytes) | Format | Units | Name | Description |
|-------------------|--------------|--------|-------|---------------------------|---|
| 0 | 4 | float | kB/s | uart_a.tx_throughput | UART transmit throughput |
| 4 | 4 | float | kB/s | uart_a.rx_throughput | UART receive throughput |
| 8 | 2 | u16 | | uart_a.crc_error_count | UART CRC error count |
| 10 | 2 | u16 | | uart_a.io_error_count | UART IO error count |
| 12 | 1 | u8 | | uart_a.tx_buffer_level | UART transmit buffer percentage utilization (ranges from 0 to 255) |
| 13 | 1 | u8 | | uart_a.rx_buffer_level | UART receive buffer percentage utilization (ranges from 0 to 255) |
| 14 | 4 | float | kB/s | uart_b.tx_throughput | UART transmit throughput |
| 18 | 4 | float | kB/s | uart_b.rx_throughput | UART receive throughput |
| 22 | 2 | u16 | | uart_b.crc_error_count | UART CRC error count |
| 24 | 2 | u16 | | uart_b.io_error_count | UART IO error count |
| 26 | 1 | u8 | | uart_b.tx_buffer_level | UART transmit buffer percentage utiliza- tion (ranges from 0 to 255) |
| 27 | 1 | u8 | | uart_b.rx_buffer_level | UART receive buffer percentage utilization (ranges from 0 to 255) |
| 28 | 4 | float | kB/s | uart_ftdi.tx_throughput | UART transmit throughput |
| 32 | 4 | float | kB/s | uart_ftdi.rx_throughput | UART receive throughput |

| 4 | 2 | s16 | V / 1000 | cpu_vaux | Processor V_aux |
| 6 | 2 | s16 | degrees C / 100 | cpu_temperature | Processor temperature |
| 8 | 2 | s16 | degrees C / 100 | ${\tt fe_temperature}$ | Frontend temperature (if available) |
| | 10 | | | | Total Payload Length |

Table 7.4.19: MSG_DEVICE_MONITOR 0x00B5 message structure

MSG COMMAND REQ - 0x00B8 - 184

Request the recipient to execute an command. Output will be sent in MSG_LOG messages, and the exit code will be returned with MSG_COMMAND_RESP.

| Offset (bytes) | Size (bytes) | Format | Units | Name | Description |
|----------------|--------------|---------------|-------|---------------------|--|
| 0 4 | 4 N | u32 string | | sequence command | Sequence number Command line to execute |
| | N + 4 | | | | Total Payload Length |

Table 7.4.20: MSG_COMMAND_REQ 0x00B8 message structure

MSG COMMAND RESP - 0x00B9 - 185

The response to MSG_COMMAND_REQ with the return code of the command. A return code of zero indicates success.

| Offset (bytes) | Size (bytes) | Format | Units | Name | Description |
|----------------|--------------|--------|-------|----------|----------------------|
| 0 | 4 | u32 | | sequence | Sequence number |
| 4 | 4 | s32 | | code | Exit code |
| | 8 | | | | Total Payload Length |

Table 7.4.21: MSG_COMMAND_RESP 0x00B9 message structure

MSG COMMAND OUTPUT - 0x00BC - 188

Returns the standard output and standard error of the command requested by MSG_COMMAND_REQ. The sequence number can be used to filter for filtering the correct command.

| Offset (bytes) | Size (bytes) | Format | Units | Name | Description |
|----------------|--------------|---------------|-------|------------------|---|
| 0 4 | 4 N | u32 string | | sequence line | Sequence number Line of standard output or standard error |
| | N+4 | | | | Total Payload Length |

Table 7.4.22: MSG_COMMAND_OUTPUT 0x00BC message structure

MSG NETWORK STATE REQ - 0x00BA - 186

Request state of Piksi network interfaces. Output will be sent in MSG_NETWORK_STATE_RESP messages

| Offset (bytes) | Size (bytes) | Format | Units | Name | Description |
|----------------|--------------|--------|-------|------|----------------------|
| | 0 | | | | Total Payload Length |

Table 7.4.23: MSG_NETWORK_STATE_REQ 0x00BA message structure

MSG NETWORK STATE RESP - 0x00BB - 187

The state of a network interface on the Piksi. Data is made to reflect output of ifaddrs struct returned by getifaddrs in c.

| Offset (bytes) | Size (bytes) | Format | Units | Name | Description |
|----------------|--------------|--------|-------|----------------|--|
| 0 | 4 | u8[4] | | ipv4_address | IPv4 address (all zero when unavailable) |
| 4 | 1 | u8 | | ipv4_mask_size | IPv4 netmask CIDR notation |
| 5 | 16 | u8[16] | | ipv6_address | IPv6 address (all zero when unavailable) |
| 21 | 1 | u8 | | ipv6_mask_size | IPv6 netmask CIDR notation |
| 22 | 4 | u32 | | rx_bytes | Number of Rx bytes |
| 26 | 4 | u32 | | tx_bytes | Number of Tx bytes |

| | 50 | | | | Total Payload Length |

Table 7.4.24: MSG_NETWORK_STATE_RESP 0x00BB message structure

MSG NETWORK BANDWIDTH USAGE - 0x00BD - 189

The bandwidth usage, a list of usage by interface.

| Offset (bytes) | Size (bytes) | Format | Units | Name | Description |
|-------------------|-----------------|--------|-------|---------------------------------|---|
| 40N + 0 | 8 | u64 | ms | interfaces[N].duration | Duration over which the measurement was collected |
| 40N + 8 | 8 | u64 | | $interfaces[N].total_bytes$ | Number of bytes handled in total within period |
| 40N + 16 | 4 | u32 | | $interfaces[N].rx_bytes$ | Number of bytes transmitted within period |
| 40N + 20 | 4 | u32 | | $interfaces[N].tx_bytes$ | Number of bytes received within period |
| $40\mathtt{N}+24$ | 16 | string | | $interfaces[N].interface_name$ | Interface Name |
| | 40N | | | | Total Payload Length |

Table 7.4.25: MSG_NETWORK_BANDWIDTH_USAGE 0x00BD message structure

MSG CELL MODEM STATUS - 0x00BE - 190

If a cell modem is present on a piksi device, this message will be send periodically to update the host on the status of the modem and its various parameters.

| Offset (bytes) | Size (bytes) | Format | Units | Name | Description |
|-------------------|--------------|--------|-------|-------------------|--|
| 0 | 1 | s8 | dBm | signal_strength | Received cell signal strength in dBm, zero translates to unknown |
| 1 | 4 | float | | signal_error_rate | BER as reported by the modem, zero trans- lates to unknown |
| 5 | N | u8[N] | | reserved | Unspecified data TBD for this schema |
| | N + 5 | | | | Total Payload Length |

Table 7.4.26: MSG_CELL_MODEM_STATUS 0x00BE message structure

MSG SPECAN - 0x0051 - 81

Spectrum analyzer packet.

| Offset (bytes) | Size (bytes) | Format | Units | Name | Description |
|----------------|-----------------|--------|-------|------------------------|--|
| 0 | 2 | u16 | | channel_tag | Channel ID |
| 2 | 4 | u32 | ms | t.tow | Milliseconds since start of GPS week |
| 6 | 4 | s32 | ns | ${\tt t.ns_residual}$ | Nanosecond residual of millisecond-rounded TOW (ranges from -500000 to 500000) |
| 10 | 2 | u16 | week | t.wn | GPS week number |
| 12 | 4 | float | MHz | freq_ref | Reference frequency of this packet |
| 16 | 4 | float | MHz | freq_step | Frequency step of points in this packet |
| 20 | 4 | float | dB | amplitude_ref | Reference amplitude of this packet |
| 24 | 4 | float | dB | amplitude_unit | Amplitude unit value of points in this packet |
| 28 | N | u8[N] | | amplitude_value | Amplitude values (in the above units) of points in this packet |
| | $\mathbb{N}+28$ | | | | Total Payload Length |

Table 7.4.27: MSG_SPECAN 0x0051 message structure

MSG FRONT END GAIN - 0x00BF - 191

This message describes the gain of each channel in the receiver frontend. Each gain is encoded as a non-dimensional percentage relative to the maximum range possible for the gain stage of the frontend. By convention, each gain array has 8 entries and the index of the array corresponding to the index of the rf channel in the frontend. A gain of 127 percent encodes that rf channel is not present in the hardware. A negative value implies an error for the particular gain stage as reported by the frontend.

| Offset (bytes) | Size (bytes) | Format | Units | Name | Description |
|----------------|--------------|----------------|--------------------|--------------------|---|
| 0 | 8 | s8[8] s8[8] | percent percent | rf_gain if_gain | RF gain for each frontend channel Intermediate frequency gain for each frontend channel |
| | 16 | | | | Total Payload Length |

Table 7.4.28: MSG_FRONT_END_GAIN 0x00BF message structure

7.5 Sbas

SBAS data

MSG SBAS RAW - 0x7777 - 30583

This message is sent once per second per SBAS satellite. ME checks the parity of the data block and sends only blocks that pass the check.

| Offset (bytes) | Size (bytes) | Format | Units | Name | Description |
|----------------|--------------|--------|-------|--------------|--|
| 0 | 1 | u8 | | sid.sat | Constellation-specific satellite identifier. This field for Glonass can either be (100+FCN) where FCN is in [-7,+6] or the Slot ID in [1,28] |
| 1 | 1 | u8 | | sid.code | Signal constellation, band and code |
| 2 | 4 | u32 | ms | tow | GPS time-of-week at the start of the data block. |
| 6 | 1 | u8 | | message_type | SBAS message type (0-63) |
| 7 | 27 | u8[27] | | data | Raw SBAS data field of 212 bits (last byte padded with zeros). |
| | 34 | | | | Total Payload Length |

Table 7.5.1: MSG_SBAS_RAW 0x7777 message structure

MSG SSR CODE BIASES - 0x05E1 - 1505

The precise code biases message is to be added to the pseudorange of the corresponding signal to get corrected pseudorange. It is an equivalent to the 1059 / 1065 RTCM message types

| Offset (bytes) | Size (bytes) | Format | Units | Name | Description |
|----------------|--------------|--------|--------|--------------------------|--|
| 0 | 4 | u32 | s | time.tow | Seconds since start of GPS week |
| 4 | 2 | u16 | week | time.wn | GPS week number |
| 6 | 1 | u8 | | sid.sat | Constellation-specific satellite identifier. This field for Glonass can either be (100+FCN) where FCN is in [-7,+6] or the Slot ID in [1,28] |
| 7 | 1 | u8 | | sid.code | Signal constellation, band and code |
| 8 | 1 | u8 | | ${\tt update_interval}$ | Update interval between consecutive corrections. Encoded following RTCM DF391 specification. |
| 9 | 1 | u8 | | iod_ssr | IOD of the SSR correction. A change of Issue Of Data SSR is used to indicate a change in the SSR generating configuration |
| 3N + 10 | 1 | u8 | | $	exttt{biases[N].code}$ | Signal encoded following RTCM specifications (DF380, DF381, DF382 and DF467). |
| 3N + 11 | 2 | s16 | 0.01 m | biases[N].value | Code bias value |
| | 3N + 10 | | | | Total Payload Length |

Field 7.6.2: Signal constellation, band and code (sid.code)

Table 7.6.4: values (sid.code[0:7])

MSG SSR PHASE BIASES - 0x05E6 - 1510

The precise phase biases message contains the biases to be added to the carrier phase of the corresponding signal to get corrected carrier phase measurement, as well as the satellite yaw angle to be applied to compute the phase wind-up correction. It is typically an equivalent to the 1265 RTCM message types

| Offset (bytes) | Size (bytes) | Format | Units | Name | Description |
|-------------------|-----------------|--------|------------------------------------|---|--|
| 0 | 4 | u32 | S | time.tow | Seconds since start of GPS week |

Table 7.6.6: values (sid.code[0:7])

MSG SSR STEC CORRECTION - 0x05FB - 1531

The Slant Total Electron Content per space vehicle, given as polynomial approximation for a given tile. This should be combined with the MSG_SSR_GRIDDED_CORRECTION message to get the state space representation of the atmospheric delay.

It is typically equivalent to the QZSS CLAS Sub Type 8 messages.

| Offset (bytes) | Size (bytes) | Format | Units | Name | Description |
|-------------------|-----------------|--------|--|---|---|
| 0 | 2 | u16 | | header.tile_set_id | Unique identifier of the tile set this tile belongs to. |
| 2 | 2 | u16 | | header.tile_id | Unique identifier of this tile in the tile set. |
| 4 | 4 | u32 | S | header.time.tow | Seconds since start of GPS week |
| 8 | 2 | u16 | week | header.time.wn | GPS week number |
| 10 | 1 | u8 | | header.num_msgs | Number of messages in the dataset |
| 11 | 1 | u8 | | header.seq_num | Position of this message in the dataset |
| 12 | 1 | u8 | | header.update_interval | Update interval between consecutive corrections. Encoded following RTCM DF391 specification. |
| 13 | 1 | u8 | | header.iod_atmo | IOD of the SSR atmospheric cor- rection |
| 11N + 14 | 1 | u8 | | stec_sat_list[N].sv_id.satId | ID of the space vehicle within its constellation |
| 11N + 15 | 1 | u8 | | stec_sat_list[N].sv_id.constellation | Constellation ID to which the SV belongs |
| 11N + 16 | 1 | u8 | | $\verb stec_sat_list[N] .stec_quality_indicator $ | Quality of the STEC data. Encoded following RTCM DF389 specification but in units of TECU instead of m. |
| 11N + 17 | 8 | s16[4] | C00 = 0.05 TECU, C01/C10 = 0.02 TECU/deg, C11 0.02 TECU/deg^2 | <pre>stec_sat_list[N].stec_coeff</pre> | Coefficents of the STEC polynomial in the order of C00, C01, C10, C11 |
| | 11N + 14 | | | | Total Payload Length |

Table 7.6.7: MSG_SSR_STEC_CORRECTION 0x05FB message structure

MSG SSR GRIDDED CORRECTION — 0x05FC — 1532

STEC residuals are per space vehicle, troposphere is not. It is typically equivalent to the QZSS CLAS Sub Type 9 messages

| Offset (bytes) | Size (bytes) | Format | Units | Name | Description |
|-------------------|-----------------|--------|---|---|---|
| 0 | 2 | u16 | | header.tile_set_id | Unique identifier of the tile set this tile belongs to. |

| 5N + 24 | 1 | u8 | | ${\tt element.stec_residuals[N].sv_id.constellation}$ | Constellation ID to which the SV belongs |
| 5N + 25 | 2 | s16 | 0.04 TECU | $\verb element.stec_residuals[N] .residual $ | STEC residual |
| 5N + 27 | 1 | u8 | modified DF389 scale; class is | $\verb element.stec_residuals[N] .stddev $ | stddev |
| | April 30, 2021 | | upper | | |

MSG SSR TILE DEFINITION - 0x05F6 - 1526

Provides the correction point coordinates for the atmospheric correction values in the MSG_SSR_STEC_CORRECTION and MSG_SSR_GRIDDED_CORRECTION messages.

Based on ETSI TS 137 355 V16.1.0 (LTE Positioning Protocol) information element GNSS-SSR-CorrectionPoints. SBP only supports gridded arrays of correction points, not lists of points.

| Offset (bytes) | Size (bytes) | Format | Units | Name | Description |
|----------------|--------------|--------|--------------------|---------------------|--|
| 0 | 2 | u16 | | tile_set_id | Unique identifier of the tile set this tile belongs to. |
| 2 | 2 | u16 | | tile_id | Unique identifier of this tile in the tile set. See GNSS-SSR-ArrayOfCorrectionPoints field correctionPointSetID. |
| 4 | 2 | s16 | encoded degrees | corner_nw_lat | North-West corner correction point latitude. The relation between the latitude X in the range [-90, 90] and the coded number N is: N = floor((X / 90) * 2^14) See GNSS-SSR-ArrayOfCorrectionPoints field referencePointLatitude. |
| 6 | 2 | s16 | encoded degrees | corner_nw_lon | North-West corner correction point longtitude. The relation between the longtitude X in the range [-180, 180] and the coded number N is: N = floor((X / 180) * 2^15) See GNSS-SSR-ArrayOfCorrectionPoints field referencePointLongitude. |
| 8 | 2 | u16 | 0.01 degrees | ${	t spacing_lat}$ | Spacing of the correction points in the latitude direction. See GNSS-SSR-ArrayOfCorrectionPoints field stepOfLatitude. |
| 10 | 2 | u16 | 0.01 degrees | $spacing_lon$ | Spacing of the correction points in the longtitude direction. See GNSS-SSR-ArrayOfCorrectionPoints field stepOfLongtitude. |
| 12 | 2 | u16 | | rows | Number of steps in the latitude direction. See GNSS-SSR-ArrayOfCorrectionPoints field numberOfStepsLatitude. |
| 14 | 2 | u16 | | cols | Number of steps in the longtitude direction. See GNSS-SSR-ArrayOfCorrectionPoints field numberOfStepsLongtitude. |
| 16 | 8 | u64 | | bitmask | Specifies the availability of correction data at the correction points in the array. If a specific bit is enabled (set to 1), the correction is not available. Only the first rows * cols bits are used, the remainder are set to 0. If there are more then 64 correction points the remaining corrections are always available. Starting with the northwest corner of the array (top left on a north oriented map) the correction points are enumerated with row precedence - first row west to east, second row west to east, until last row west to east - ending with the southeast corner of the array. See GNSS-SSR-ArrayOfCorrectionPoints field bitmaskOfGrids but note the definition of the |
| | | | | | bits is inverted. |
| | 24 | | | | Total Payload Length |

Table 7.6.9: MSG_SSR_TILE_DEFINITION 0x05F6 message structure

MSG SSR SATELLITE APC - 0x0604 - 1540

| Offset (bytes) | Size (bytes) | Format | Units | Name | Description |
|----------------|--------------|--------|-------|---|--|
| 32N + 0 | 1 | u8 | | apc[N].sid.sat | Constellation-specific satellite identifier. This field for Glonass can either be (100+FCN) where FCN is in [-7,+6] or the Slot ID in [1,28] |
| 32N + 1 | 1 | u8 | | $\mathtt{apc}[\mathtt{N}].\mathtt{sid}.\mathtt{code}$ | Signal constellation, band and code |
| 32N + 2 | 1 | u8 | | apc[N].sat_info | Additional satellite information |
| 32N + 3 | 2 | u16 | | apc[N].svn | Satellite Code, as defined by IGS. Typically the space vehicle number. |
| 32N + 5 | 6 | s16[3] | 1 mm | apc[N].pco | Mean phase center offset, X Y and Z axises. See IGS ANTEX file format description for co- ordinate system definition. |
| 32N + 11 | 21 | s8[21] | 1 mm | apc[N].pcv | Elevation dependent phase center variations. First element is 0 degrees separation from the Z axis, subsequent elements represent elevation variations in 1 degree increments. |
| | 32N | | | | Total Payload Length |

Description

Unknown Type GPS I

7.7 Tracking

Satellite code and carrier-phase tracking messages from the device.

MSG TRACKING STATE - 0x0041 - 65

The tracking message returns a variable-length array of tracking channel states. It reports status and carrier-to-noise density measurements for all tracked satellites.

| Offset (bytes) | Size (bytes) | Format | Units | Name | Description |
|-------------------|--------------|--------|-----------|---------------------------|--|
| 4N + 0 | 1 | u8 | | ${\sf states[N].sid.sat}$ | Constellation-specific satellite identifier. This field for Glonass can either be (100+FCN) where FCN is in [-7,+6] or the Slot ID in [1,28] |
| 4N + 1 | 1 | u8 | | ${	t states[N].sid.code}$ | Signal constellation, band and code |
| 4N + 2 | 1 | u8 | | ${	t states[N].fcn}$ | Frequency channel number (GLONASS only) |
| 4N+3 | 1 | u8 | dB Hz / 4 | states[N].cn0 | Carrier-to-Noise density. Zero implies invalid cn0. |
| | 4N | | | | Total Payload Length |

7.8 User

Messages reserved for use by the user.

MSG USER DATA - 0x0800 - 2048

This message can contain any application specific user data up to a maximum length of 255 bytes per message.

| Offset (bytes) | Size (bytes) | Format | Units | Name | Description |
|----------------|--------------|--------|-------|----------|----------------------|
| 0 | N | u8[N] | | contents | User data payload |
| | N | | | | Total Payload Length |

Table 7.8.1: MSG_USER_DATA 0x0800 message structure

7.9 Vehicle

Messages from a vehicle.

MSG ODOMETRY - 0x0903 - 2307

Message representing the x component of vehicle velocity in the user frame at the odometry reference point(s) specified by the user. The offset for the odometry reference point and the definition and origin of the user frame are defined through the device settings interface. There are 4 possible user-defined sources of this message which are labeled arbitrarily source 0 through 3. If using "processor time" time tags, the receiving end will expect a 'MSG_GNSS_TIME_OFFSET' when a PVT fix becomes available to synchronise odometry measurements with GNSS. Processor time shall roll over to zero after one week.

| Offset (bytes) | Size (bytes) | Format | Units | Name | Description |
|----------------|--------------|--------|-------|----------|--|
| 0 | 4 | u32 | ms | tow | Time field representing either milliseconds in the GPS Week or local CPU time from the producing system in milliseconds. See the tow_source flag for the exact source of this timestamp. |
| 4 | 4 | s32 | mm/s | velocity | The signed forward component of vehicle velocity. |
| 8 | 1 | u8 | | flags | Status flags |
| | 9 | | | | Total Payload Length |

Table 7.9.4: Vehicle Metadata values (flags[5:6])

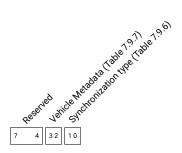

Field 7.9.1: Status flags (flags)

MSG WHEELTICK - 0x0904 - 2308

Message containing the accumulated distance travelled by a wheel located at an odometry reference point defined by the user. The offset for the odometry reference point and the definition and origin of the user frame are defined through the device settings interface. The source of this message is identified by the source field, which is an integer ranging from 0 to 255. The timestamp associated with this message should represent the time when the accumulated tick count reached the value given by the contents of this message as accurately as possible. If using "local CPU time" time tags, the receiving end will expect a 'MSG_GNSS_TIME_OFFSET' when a PVT fix becomes available to synchronise wheeltick measurements with GNSS. Local CPU time shall roll over to zero after one week.

| Offset (bytes) | Size (bytes) | Format | Units | Name | Description |
|----------------|--------------|--------|-------------------------------|--------|---|
| 0 | 8 | u64 | us | time | Time field representing either microseconds since the last PPS, microseconds in the GPS Week or local CPU time from the producing system in mi- croseconds. See the synch_type field for the exact meaning of this timestamp. |
| 8 | 1 | u8 | | flags | Field indicating the type of timestamp contained in the time field. |
| 9 | 1 | u8 | | source | ID of the sensor producing this message |
| 10 | 4 | s32 | arbitrary dis- tance units | ticks | Free-running counter of the accumulated distance for this sensor. The counter should be incrementing if travelling into one direction and decrementing when travelling in the opposite direction. |
| | 14 | | | | Total Payload Length |
